THE PRESENT STATUS OF MINERALOGY

To download **The Present Status of Mineralogy** PDF, you should click the web link under and download the ebook or have access to other information that are in conjunction with THE PRESENT STATUS OF MINERALOGY book.

CreateSpace Independent Publishing Platform. Paperback. Condition: New. This item is printed on demand. 30 pages. Dimensions: 7.8in. x 5.1in. x 0.1in. The Present Status of Mineralogy is a short essay by Frank Wigglesworth Clarke. Frank Wigglesworth Clarke (March 19, 1847 May 23, 1931) of Boston, Massachusetts, and Washington, D. C. was an American scientist and chemist. Sometimes known as the Father of Geochemistry, Clarke is credited with determining the composition of the Earth's crust. He was a founder of The American Chemical Society and served as its President, 1901. Professor Clarke was the first theorist to advance a hypothesis regarding the evolution of elements. This concept emerged early in his intellectual career. His *Evolution and the Spectroscope* (1873) appear in *Popular Science Monthly*. It noted a parallel evolution of minerals, accompanying that of plant life. He was known for pushing mineral analysis beyond analytical results. He sought compilations of the associations, alterations, and syntheses of each mineral sample. His study *Constants of Nature* (Smithsonian Institution 1876) was one of the first collections of both physical and chemical constants. The USGS's Atomic Weights series became standard references for the chemistry and geochemistry professions and academic fields. Clarke was also an academic collaborator. His *Data on Geochemistry* became a means of collecting peer professional efforts for common use across five successive editions. Beginning with his *Constitution of silicates* (1895), Professor Clarke advanced a methodology of geochemical analysis which described a mineral's composition through fact coordination. Priority was placed on contextualizing the research by describing constitution, structure and relationship with other minerals. The mineral samples' natural history was the end goal, a means of articulating the minerals' alteration products and pseudomorphs as a record of chemical change. To this record Clarke added the artificial history record available in the laboratory. The natural and artificial...
