

Analysis and Control of Age-Dependent Population Dynamics (Hardback)

By Sebastian Anita

Springer, Netherlands, 2000. Hardback. Condition: New. 2000 ed.. Language: English . Brand New Book ***** Print on Demand *****. The material of the present book is an extension of a graduate course given by the author at the University Al.I. Cuza Iasi and is intended for students and researchers interested in the applications of optimal control and in mathematical biology. Age is one of the most important parameters in the evolution of a biological population. Even if for a very long period age structure has been considered only in demography, nowadays it is fundamental in epidemiology and ecology too. This is the first book devoted to the control of continuous age structured population dynamics. It focuses on the basic properties of the solutions and on the control of age structured population dynamics with or without diffusion. The main goal of this work is to familiarize the reader with the most important problems, approaches and results in the mathematical theory of age-dependent models. Special attention is given to optimal harvesting and to exact controllability problems, which are very important from the economic or ecological points of view. We use some new concepts and techniques in modern control theory such as Clarke...

Reviews

This ebook is wonderful. It typically does not expense too much. You wont really feel monotony at at any time of your own time (that's what catalogs are for relating to should you request me).

-- **Milan Turner**

This created publication is wonderful. This can be for those who statte that there had not been a worth looking at. Your lifestyle period will probably be transform when you comprehensive looking at this book.
