

A New Construction of Homogeneous Quaternionic Manifolds and Related Geometric Structures

Filesize: 9.16 MB

Reviews

This created pdf is excellent. We have read through and i also am sure that i am going to going to study yet again yet again in the future. You will not truly feel monotony at at any time of your time (that's what catalogues are for concerning should you check with me).

American Mathematical Society. Paperback. Book Condition: new. BRAND NEW, A New Construction of Homogeneous Quaternionic Manifolds and Related Geometric Structures, Vicente Cortes, Let $V = \{\mathbb{R}^p\}$ be the pseudo-Euclidean vector space of signature (p, q) , $p \geq 3$ and W a module over the even Clifford algebra $C\ell^0(V)$. A homogeneous quaternionic manifold (M, Q) is constructed for any \mathfrak{V} -equivariant linear map $\Pi: \wedge^2 W \rightarrow V$. If the skew symmetric vector valued bilinear form Π is nondegenerate then (M, Q) is endowed with a canonical pseudo-Riemannian metric g such that (M, Q, g) is a homogeneous quaternionic pseudo-Kähler manifold. If the metric g is positive definite, i.e. a Riemannian metric, then the quaternionic Kähler manifold (M, Q, g) is shown to admit a simply transitive solvable group of automorphisms. In this special case ($p=3$) we recover all the known homogeneous quaternionic Kähler manifolds of negative scalar curvature (Aleksievsky spaces) in a unified and direct way. If $p > 3$ then M does not admit any transitive action of a solvable Lie group and we obtain new families of quaternionic pseudo-Kähler manifolds. Then it is shown that for $Q = 0$ the noncompact quaternionic manifold (M, Q) can be endowed with a Riemannian metric h such that (M, Q, h) is a homogeneous quaternionic Hermitian manifold, which does not admit any transitive solvable group of isometries if $p > 3$. The twistor bundle $Z \rightarrow M$ and the canonical $\mathrm{SO}(3)$ -principal bundle $S \rightarrow M$ associated to the quaternionic manifold (M, Q) are shown to be homogeneous under the automorphism group of the base. More specifically, the twistor space is a homogeneous complex manifold carrying an invariant holomorphic distribution \mathcal{D} of complex codimension one, which is a complex contact structure if and only if Π is nondegenerate. Moreover, an equivariant open holomorphic immersion $Z \rightarrow \bar{Z}$ into a homogeneous complex manifold \bar{Z} of complex algebraic group is constructed....
